

A person stands in a vast, dark desert at night, looking up at a large, glowing, saucer-shaped UFO hovering in the sky. The UFO has a bright, glowing ring around its perimeter and is emitting a bright light. The person is silhouetted against the dark landscape, which is illuminated by a warm, orange glow from the ground. The sky is dark with some faint stars and a blueish light source on the left side.

THE UFO MOVIE
THEY
DON'T WANT
YOU TO SEE

A documentary bringing you the real science behind today's UFO mania.

In an age when misinformation, alternative facts, and conspiracy theories have become mainstream, UFOs have risen to become one of the most-talked about pop culture phenomena. With all of this noise, how can anyone know how much of this is true? What is in our skies? What do we know, and how do we know it? And most importantly: ***Are we being visited?***

MUSIC BY LEE SANDERS WRITTEN AND PRESENTED BY BRIAN DUNNING

FAQs

Who are THEY?

Obviously the title is tongue-in-cheek. But there actually are people who would prefer that you know less real science... because the less you know, the more susceptible you are to mainstream programming that promotes and sensationalizes pop UFO mythology.

Is this just more spooky storytelling like we've seen a million times?

Quite the opposite! And it's not a "debunking" film either. Whatever questions we have about UFOs and aliens, science already has a lot of the answers and we're working on answering the rest of them. The film features experts in:

- Physics & relativity
- Exobiology
- Exoplanetary spectral analysis
- Image analysis
- Pilot training and air traffic control
- Defense

The UFO Movie THEY Don't Want You to See lays out for you exactly what we know and how we know it.

Your host...

Science writer Brian Dunning

has been reporting on the history of belief in alien visitation for 17 years. His recent movies include the educational film *Principles of Curiosity* (2017) and the feature documentary *Science Friction* (2022) revealing the deceptive editing that sometimes happens to science experts on mainstream television programs. He is a member of the National Association of Science Writers.

<https://www.imdb.com/name/nm3077608/>

As a science podcaster, Dunning has won pretty much every podcast award that exists. See below...

We all love the idea of visiting aliens — but when we visit astrobiologist Dr. Kaitlin Rasmussen at the 107-inch telescope in Texas, she tells us of some of the deep problems with interstellar travel.

Astrophysicist Dakotah Tyler discusses the popular belief that aliens are probably smarter than us and therefore know the laws of physics better than we do. Is that true?

President Jimmy Carter once saw a UFO — and we solve his case, along with his grandson Josh Carter at the presidential residence in Plains, Georgia.

Lt Col Hal Bidlack, Ph.D (USAF, ret.), a former Minuteman missile officer, walks us through the rumored story that UFOs have been known to disable the US nuclear arsenal.

Everyone wants to know the deal with the US Navy UFO videos! We get the straight dope from Mick West, the world's foremost UFO video analyst, whose ID on these videos was accepted by the Pentagon's AARO.

How likely is the very popular explanation that some UFOs are probably secret military aircraft? There is a very firm answer for this — and most people have never heard it before.

Are pilots “trained observers”? Are they better able than anyone else to ID something weird in the sky? We fly with one of the nation's top flight instructors, Chris Freeze, to learn what pilots can (and can't) do.

Jason Bush, a pilot and senior Air Traffic Controller, tells what kind of mistakes military pilots make just as often as other pilots, and as ordinary people.

Congress keeps having UFO hearings. What are they doing right, and what are they doing wrong?

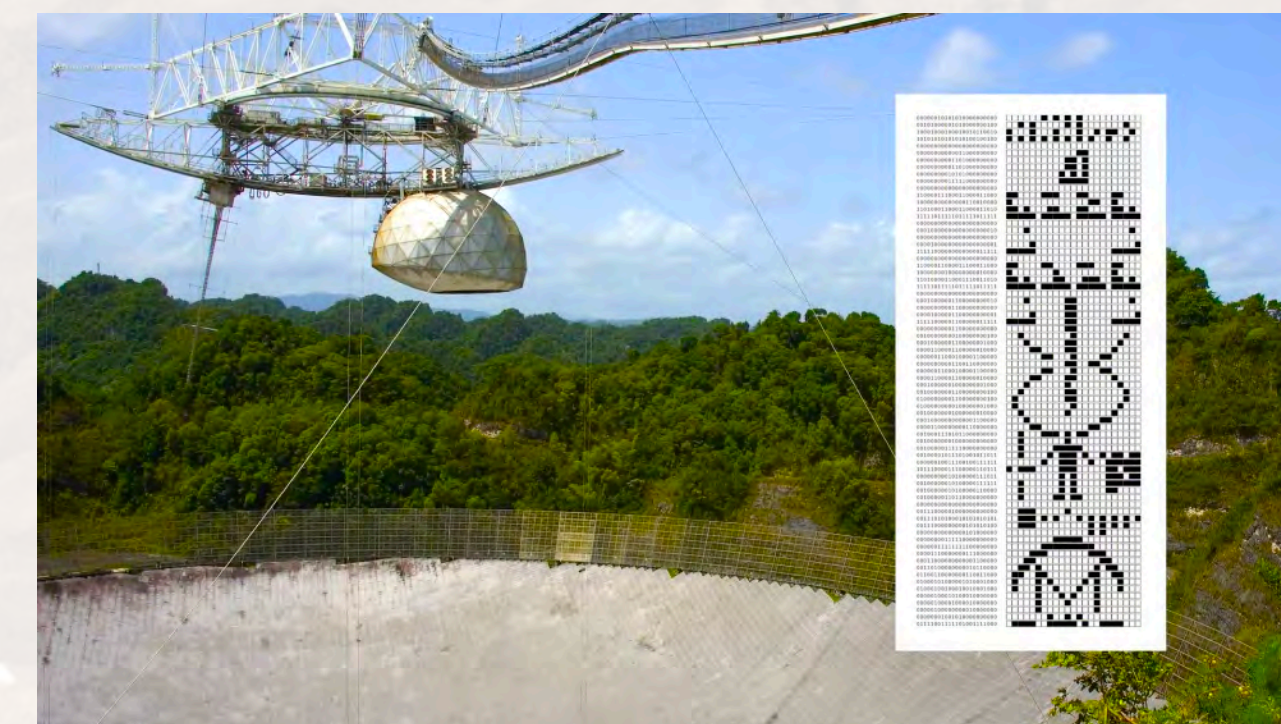

A popular story from television says a UFO once landed at an Air Force base in Rendlesham Forest, England. What is the quality of evidence that this ever happened?

A popular story of Zimbabwe says a UFO landed in a schoolyard and gave a telepathic message to 62 children. What is the quality of evidence supporting this event?

Finally, the most exciting news of all — what are we doing to reach out to possible alien civilizations, and how much do we know about how they're most likely to reach out to us — and why?

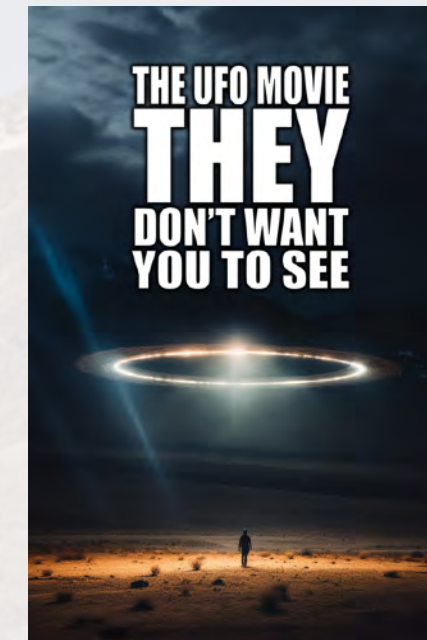

About the writer/director

Brian Dunning is a documentary filmmaker and host of the Skeptoid podcast. His recent films include the 40-min free educational movie Principle of Curiosity (2017) and the award-winning feature documentary Science Friction (2022) now on streaming services. He is a member of the National Association of Science Writers.

About the composer

Over the last two decades, Lee Sanders has secured his reputation as a creative force in music by aiding and abetting filmmakers in Hollywood and around the world. His style is intense and immediate, drawing from his deep experience in orchestral, electronic, and world music. Lee has won eight BMI Film & Television Awards for his work. His credits span dozens of television shows, films, video games and works for online media and theatre.

Info on the film

The UFO Movie is completed and distributed via Filmhub. A secure screener is available.

It is currently on the festival circuit.
